**INTRODUCTION**

This subject bibliography is based on the World Bibliography published by Lienhard & Smithers ["Psocoptera (Insecta) - World Catalogue and Bibliography", *Instrumenta Biodiversitatis*, vol. 5, 2002, Muséum d'histoire naturelle, Genève, xli+745 pp. ISBN 2-88139-009-9] and the Additions to the World Bibliography (Parts 1-15), published between 2003 and 2016 in *Psocid News* (no. 4-18) (<http://hdl.handle.net/2115/35519>).

The subject references are given under 15 main subject headings (keywords). The references are listed chronologically for each keyword (except in cases where some publications by the same author have been put together on the same line). References from a given year are listed alphabetically. The lists of subject references are not exhaustive, but they should give a first orientation to students of psocids interested in a particular subject. The chronological order allows a historical overview and an immediate access to the most recent literature. The references based on the World Bibliography are indicated by "(WB)", those based on the Additions by the number of the Part of the Additions where the complete bibliographical reference can be found "(Add. 1, 2....15)".

Sometimes genera or families (rarely species) treated in a particular publication are indicated in parentheses; scientific names of psocid genera and species are printed in italics. The most important pest genus in Psocoptera is *Liposcelis*; this genus is explicitly mentioned in many cases, even in "non-pest" references; "(*Liposcelis* etc.)" indicates that other genera are also treated in the same paper.

In most taxonomic papers, especially in regional monographs or monographs of sub-groups of Psocoptera, more or less explicit remarks are also made on morphology, biology, ecology etc. These references are here not always listed separately under the subject heading(s) concerned. However, in the World Catalogue (and in the Additions to it) they are listed for each species mentioned in the particular paper.

References concerning the faunistics of particular regions or countries are not listed; these are accessible via the "Country Checklists of the Psocoptera Species of the World" extracted from Lienhard & Smithers (2002) and published in Special Issue no. I of *Psocid News* (<http://hdl.handle.net/2115/35519>) or, for most recent data, by searching the different parts of the Additions to the World Catalogue published in *Psocid News*.

## **EDITORIAL**

"Psocid News" publishes any kinds of topics (formal or informal) that may be interesting for psocidologists, but articles containing official nomenclatural acts (e.g. descriptions of new taxa, proposals of new combinations or new synonyms) will not be accepted for publication by the editor (see below).

Psocid News (ISSN 1348-1770) is only distributed electronically and is available at PsocoNet Homepage <<http://www.psocodea.org>>, Hokkaido University Collection of Scholarly and Academic Papers (HUSCAP) <<http://hdl.handle.net/2115/35519>> and National Diet Library Homepage <<http://www.ndl.go.jp/en/>>.

**Disclaimer.** "Psocid News" is not a published work within the meaning of ICZN.

**Next issue.** Special issues are published irregularly. The next regular issue is scheduled on Feb. 2017. Please let me have all contributions by Jan. 31 2017.

**Editorial address.** Psocid News is edited by Kazunori Yoshizawa at the Systematic Entomology, Faculty of Agriculture, Hokkaido University, Sapporo, 060-8589 JAPAN.
